NatureScot advise the following:

1. All values in **green** we accept. These are based on current guidance via either Guidance Note 7 and/or our 27 March 2024 advice, by letter to the Project.
2. All values in **purple** we accept. To note these are likely to change based on Cook (2023) but for the purpose of the West of Orkney SEI we are content with these values being used. These should be referenced.
3. All values in **blue** we accept but these require clear referencing.
4. The **red values**, should be used for great skua wingspan mean and SD. This is to reflect values in Snow & Perrins (1987).
5. Based on agreement this morning, the values in **orange** will change to **10.9 and 0.9** based on Pennycuick (1997).
